All rights reserved. Total or partial reproduction of this manual in whatever form, whether by printed or electronic means, is forbidden. While guaranteeing that the information contained in it has been carefully checked, CUSTOM S.p.A. and other entities utilized in the realization of this manual bear no responsibility for how the manual is used. Information regarding any errors found in it or suggestions on how it could be improved are appreciated. Since products are subject to continuous check and improvement, CUSTOM S.p.A. reserves the right to make changes in information contained in this manual without prior notification.

The pre-installed multimedia contents are protected from Copyright CUSTOM S.p.A. Other company and product names mentioned herein may be trademarks of their respective companies. Mention of third-party products is for informational purposes only and constitutes neither an endorsement nor a recommendation. CUSTOM S.p.A. assumes no responsibility with regard to the performance or use of these products.

THE IMAGES USED IN THIS MANUAL ARE USED AS AN ILLUSTRATIVE EXAMPLES. THEY COULDN'T REPRODUCE THE DESCRIBED MODEL FAITHFULLY.

UNLESS OTHERWISE SPECIFIED, THE INFORMATION GIVEN IN THIS MANUAL ARE REFERRED TO ALL MODELS IN PRODUCTION AT THE ISSUE DATE OF THIS DOCUMENT.

GENERAL INSTRUCTIONS

CUSTOM S.p.A. declines all responsibility for accidents or damage to persons or property occurring as a result of tampering, structural or functional modifications, unsuitable or incorrect installations, environments not in keeping with the equipment's protection degree or with the required temperature and humidity conditions, failure to carry out maintenance and periodical inspections and poor repair work.

GENERAL SAFETY INFORMATION

Your attention is drawn to the following actions that could compromise the characteristics of the product:

- Read and retain the instructions which follow.
- Follow all indications and instructions given on the device.
- Make sure that the surface on which the device rests is stable. If it is not, the device could fall, seriously damaging it.
- Make sure that the device rests on a hard (non-padded) surface and that there is sufficient ventilation.
- Do not fix indissolubly the device or its accessories such as power supplies unless specifically provided in this manual.
- When positioning the device, make sure cables do not get damaged.
- [Only OEM equipment] The equipment must be installed in a kiosk or system that provides mechanical, electrical and fire protection.
- The mains power supply must comply with the rules in force in the Country where you intend to install the equipment.
- Make sure that there is an easily-accessible outlet with a capacity of no less than 10A closely to where the device is to be installed.
- Make sure the power cable provided with the appliance, or that you intend to use is suitable with the wall socket available in the system.
- Make sure the electrical system that supplies power to the device is equipped with a ground wire and is protected by a differential switch.
- Before any type of work is done on the machine, disconnect the power supply.
- Use the type of electrical power supply indicated on the device label.
- These devices are intended to be powered by a separately certified power module having an SELV, non-energy hazardous output. (IEC60950-1 second edition).
- [Only POS equipment] The energy to the equipment must be provided by power supply approved by CUSTOM S.p.A.
- Take care the operating temperature range of equipment and its ancillary components.
- Do not block the ventilation openings.
- Do not insert objects inside the device as this could cause short-circuiting or damage components that could jeopardize printer functioning.
- Do not carry out repairs on the device yourself, except for the normal maintenance operations given in the user manual.
- The equipment must be accessible on these components only to trained, authorized personnel.
- Periodically perform scheduled maintenance on the device to avoid dirt build-up that could compromise the correct, safe operation of the unit.
- Do not touch the head heating line with bare hands or metal objects. Do not perform any operation inside the printer immediately after printing because the head and motor tend to become very hot.
- Use consumables approved by CUSTOM S.p.A.

THE CE MARK AFFIXED TO THE PRODUCT CERTIFY THAT THE PRODUCT SATISFIES THE BASIC SAFETY REQUIREMENTS.

The device is in conformity with the essential Electromagnetic Compatibility and Electric Safety requirements laid down in Directives 2014/30/EU and 2014/35/EU inasmuch as it was designed in conformity with the provisions laid down in the following Standards:

- EN 55032 (*Electromagnetic compatibility of multimedia equipment - Emission Requirements*)
- EN 55024/EN 55035 (*Electromagnetic compatibility of multimedia equipment - Immunity requirements*)
- EN IEC/EN 62368-1 (*Audio/video, information and communication technology equipment*)

The device is in conformity with the essential requirements laid down in Directives 2014/53/EU about devices equipped with intentional radiators. The Declaration of Conformity and other available certifications can be downloaded from the site www.custom4u.it.

GUIDELINES FOR THE DISPOSAL OF THE PRODUCT

The crossed-out rubbish bin logo means that used electrical and electronic products shall NOT be mixed with unsorted municipal waste. For more detailed information about recycling of this product, refer to the instructions of your country for the disposal of these products.

- Do not dispose of this equipment as miscellaneous solid municipal waste, but arrange to have it collected separately.
- The re-use or correct recycling of the electronic and electrical equipment (EEE) is important in order to protect the environment and the wellbeing of humans.
- In accordance with European Directive WEEE 2012/19/EU, special collection points are available to which to deliver waste electrical and electronic equipment and the equipment can also be handed over to a distributor at the moment of purchasing a new equivalent type.
- The public administration and producers of electrical and electronic equipment are involved in facilitating the processes of the re-use and recovery of waste electrical and electronic equipment through the organisation of collection activities and the use of appropriate planning arrangements.
- Unauthorised disposal of waste electrical and electronic equipment is punishable by law with the appropriate penalties.
- For the waste sorting of the packaging materials, please check the local waste disposal laws.

The format used for this manual improves use of natural resources reducing the quantity of necessary paper to print this copy.

1	CONSULTING COMMANDS MANUAL.....	6
2	IDENTIFICATION OF THE MODELS.....	8
3	PAPER SPECIFICATIONS	9

1 CONSULTING COMMANDS MANUAL

Each command reported in this manual is described as shown in the following picture. In the first heading field is reported the hexadecimal command value and the ASCII command value. In the second heading field reported the command function. In the third heading field are listed the devices on which it is possible to use the command (for example, device AAAA).

Link to index

Command value

Command function

Devices that use the command

0x0D**<CR>**

Print and carriage return

Valid for	AAAA
	BBBB
	CCCC

[Format]	Hex	0x0D
	ASCII	CR

[Range]

[Description]	When Autofeed is "CR enabled", this command function in the same way as 0x0A, otherwise it is disregarded.
---------------	--

[Notes]	This command sets the printing position to the beginning of the line.
---------	---

Information valid for devices AAAA, BBBB, CCC

AAAA
BBBB

- This command sets the printing position to the beginning of the line.

Information valid only for devices AAAA, BBBB

CCCC

- This command is immediately executed even when the data buffer is full.
- This status is transmitted whenever data sequence is received.

Information valid only for device CCCC

[Default]	
[Reference]	0x0A
[Example]	

The fields shown in the scheme of the previous figure have the following meaning:

[Format]	ASCII and hexadecimal command value.
[Range]	Limits of the values the command and its variables can take
[Description]	Description of command function
[Notes]	Additional information about command use and settings .
[Default]	Default value of the command and its variables.
[Reference]	Pertaining commands related to described command.
[Example]	Example of using the command

Listed below are the meanings of some of symbols that may be found in the command description:

0x	indicates the representation of the command hexadecimal value (for example 0x40 means HEX 40).
n, m, t, x, y	are optional parameters that can have different values.

2 IDENTIFICATION OF THE MODELS

NOMENCLATURE	DESCRIPTION
MODUS3	MODUS3 base configuration with 200 dpi printhead
MODUS3 Presenter	MODUS3 with presenter group
MODUS3 X	MODUS3 X base configuration with 200 dpi printhead
MODUS3 X Presenter	MODUS3 X with presenter group

3 PAPER SPECIFICATIONS

Paper with black mark on the non-thermal side

The following image shows the placement of the black mark on the non-thermal side of the paper. The black mark can be placed anywhere on the whole width of the paper.

For more information about the use of paper with black mark see user manual.

All the dimensions shown in following figures are in millimetres.

2 COMMANDS LISTED BY FUNCTION

BARCODE COMMANDS

0x1D 0x28 0x6B <GS (>	25
Print two-dimensional QRcode barcode	
0x1D 0x28 0x6B <GS (k>.	26
Print two-dimensional barcode	
0x1D 0x28 0x6B [fn 065] <GS (>	28
Specify encoding scheme of QRcode barcode	
0x1D 0x28 0x6B [fn 066] <GS (>	29
Specify dot size of the module of the QRcode barcode	
0x1D 0x28 0x6B [fn 067] <GS (>	30
Specify QRcode barcode size	
0x1D 0x28 0x6B [fn 069] <GS (>	31
Specify the error correction level of the QRcode barcode	
0x1D 0x28 0x6B [fn 080] <GS (>	32
Store the QRcode barcode data in the barcode save area	
0x1D 0x28 0x6B [fn 081] <GS (>	33
Prints the QRcode barcode data	
0x1D 0x28 0x6B [Fn 065] <GS (k>.	34
Specify the number of columns of PDF417 barcode	
0x1D 0x28 0x6B [Fn 066] <GS (k>.	35
Specify the number of rows of PDF417 barcode	
0x1D 0x28 0x6B [Fn 067] <GS (k>.	36
Specify the width of a module of PDF417 barcode	
0x1D 0x28 0x6B [Fn 165] <GS (k>.	37
Specify encoding scheme of QRcode barcode	
0x1D 0x28 0x6B [Fn 166] <GS (k>.	38
Specify QRcode barcode version	
0x1D 0x28 0x6B [Fn 167] <GS (k>.	42
Specify dot size of the module of the QRcode barcode	
0x1D 0x28 0x6B [Fn 169] <GS (k>.	43
Specify the error correction level of the QRcode barcode	
0x1D 0x28 0x6B [Fn 180] <GS (k>.	44
Store the data in the barcode save area for printing in QRcode format	
0x1D 0x28 0x6B [Fn 181] <GS (k>.	45
Prints the data stored in the barcode save area in QRcode format	

0x1D 0x28 0x6B [Fn 182] <GS (k>	46
Transmit the QRcode barcode size in the barcode save area	
0x1D 0x28 0x6B [Fn 367] <GS (k>	48
Set the width of the module of two-dimensional GS1 Databar barcode	
0x1D 0x28 0x6B [Fn 380] <GS (k>	49
Store the data in the barcode save area for printing in two-dimensional GS1 Databar format	
0x1D 0x28 0x6B [Fn 381] <GS (k>	50
Encodes the data in the barcode save area and prints it in two-dimensional GS1 Databar format	
0x1D 0x28 0x6B [Fn 382] <GS (k>	52
Transmit the two-dimensional GS1 Databar barcode size in the barcode save area	
0x1D 0x28 0x6B [Fn P65] <GS (k>	54
Specify encoding scheme of AZTEC barcode	
0x1D 0x28 0x6B [Fn P67] <GS (k>	55
Specify dot size of the module of the AZTEC barcode	
0x1D 0x28 0x6B [Fn P68] <GS (k>	56
Specify AZTEC barcode size	
0x1D 0x28 0x6B [Fn P69] <GS (k>	57
Specify the error correction level of the AZTEC barcode	
0x1D 0x28 0x6B [Fn P80] <GS (k>	58
Store the data in the barcode save area for printing in AZTEC format	
0x1D 0x28 0x6B [Fn P81] <GS (k>	59
Prints the data stored in the barcode save area in AZTEC format	
0x1D 0x28 0x6B [Fn Q65] <GS (k>	60
Specify the encoding scheme of DATAMATRIX barcode	
0x1D 0x28 0x6B [Fn Q66] <GS (k>	61
Set rotation of DATAMATRIX barcode	
0x1D 0x28 0x6B [Fn Q67] <GS (k>	62
Set dot size of the module of DATAMATRIX barcode	
0x1D 0x28 0x6B [Fn Q68] <GS (k>	63
Set size of DATAMATRIX barcode	
0x1D 0x28 0x6B [Fn Q80] <GS (k>	64
Store the DATAMATRIX barcode data in the barcode save area	
0x1D 0x28 0x6B [Fn Q81] <GS (k>	65
Encodes and prints the DATAMATRIX barcode data in the barcode save area	
0x1D 0x48 <GS H>	66
Select printing position of Human Readable Interpretation (HRI) characters	
0x1D 0x66 <GS f>	68
Select font for HRI characters	

0x1D 0x68	<GS h>	69
Set barcode height		
0x1D 0x6B	<GS k>	70
Print barcode		
0x1D 0x77	<GS w>	73
Set barcode width		

CHARACTER COMMANDS

0x1B 0x20	<ESC SP>	75
Set right-side character spacing		
0x1B 0x21	<ESC !>	76
Set printing mode		
0x1B 0x25	<ESC %>	78
Enable or disable user-defined characters

Turn underline mode on/off		
0x1B 0x34	<ESC 4>	82
Turn italic mode on/off		
0x1B 0x3F	<ESC ?>	83
Cancel user-defined characters		
0x1B 0x45	<ESC E>	84
Turn bold mode on/off		
0x1B 0x47	<ESC G>	85
Turn double-strike mode on/off		
0x1B 0x4D	<ESC M>	86
Select character font		
0x1B 0x52	<ESC R>	87
Select international character set		
0x1B 0x56	<ESC V>	88
Set 90° rotated print mode		
0x1B 0x74	<ESC t>	89
Select characters code table		
0x1B 0x7B	<ESC {>	91
Turn upside-down printing mode on/off		
0x1B 0xC1		92
Select character pitch		

0x1C 0x25	<FS %>	94
Select the font type		
0x1D 0x21	<GS !>	95
Select character size		
0x1D 0x42	<GS B>	97
Turn white/black reverse printing mode on/off		

LINE SPACING COMMANDS

0x1B 0x30	<ESC 0>	98
Select 1/8-inch line spacing		
0x1B 0x32	<ESC 2>	99
Select 1/6-inch line spacing		
0x1B 0x33	<ESC 3>	100
Set line spacing using minimum units		

PRINT COMMANDS

0x0A	<LF>	101
Print and line feed		
0x0D	<CR>	102
Print and carriage return		
0x1B 0x4A	<ESC J>	103
Print and paper feed		
0x1B 0x64	<ESC d>	104
Print and feed paper n lines		
0x1B 0xFF		105
Receive the graphic page from the communication port		
0x1D 0x7C	<GS >	106
Set printing density		

STATUS COMMAND

0x10 0x04	<DLE EOT>	107
Real-time status transmission		
0x1B 0x76	<ESC v>	111
Transmit paper sensor status		
0x1C 0xEA		112
Transmit the device serial number		

0x1D 0x72	<GS r>	113
Transmit status		
0x1D 0xE0		114
Enable or disable automatic full status back		
0x1D 0xE1		115
Reading of length paper available before virtual paper-end		
0x1D 0xE2		116
Reading number of cuts performed by the autocutter		
0x1D 0xE3		117
Reading length of printed paper		
0x1D 0xE5		118
Reading number of power up		

BIT IMAGE COMMANDS

0x1B 0x2A	<ESC *>	119
Select image print mode		
0x1C 0x70	<FS p>	121
Print NV bit image		
0x1C 0x71	<FS q>	123
Define NV bit image		
0x1D 0x2A	<GS *>	126
Define received bit image		
0x1D 0x2F	<GS />	128
Print downloaded bit image		
0x1D 0x76 0x30	<GS v 0>	129
Print raster image		

PRINT POSITION COMMAND

0x08	<BS>	131
Back space		
0x09	<HT>	132
Horizontal tab		
0x1B 0x24	<ESC \$>	133
Set absolute printing position		
0x1B 0x28 0x76	<ESC (v>	134
Set relative vertical print position		
0x1B 0x44	<ESC D>	135
Set horizontal tab position		

0x1B 0x5C	<ESC \>	136
Set relative printing position

Specify encoding scheme of QRcode barcode

Valid for	MODUS3
	MODUS3 Presenter

[Format]	Hex	1D	28	6B	pL	pH	31	41	n
	ASCII	GS	(k	pL	pH	1	A	n

[Range]	$(pL + pH \times 256) = 3$ $0x00 \leq n \leq 0x01$	$(pL = 3, pH = 0)$
---------	---	--------------------

[Description] Specifies encoding type of QRcode barcode.

n	ENCODING SCHEME
0x00	QRcode
0x01	MicroQR

[Notes]

- QRcode: Encode all extended ASCII characters data up to a maximum length of 7089 numeric digits, 4296 alphabetic characters or 2953 bytes of data.
- pL and pH specify the number of successive bytes to be sent
- MicroQR (a miniature version of the QRcode barcode for short message): Encode all numbers from 0 to 9 up to a maximum length of 35 characters.

[Default] n = 0x00

<GS (k>

Store the data in the barcode save area for printing in QRcode format

Valid for	MODUS3 X MODUS3 X Presenter									
[Format]	Hex	1D	28	6B	pL	pH	31	50	31	d1...dk
	ASCII	GS	(k	pL	pH	1	P	1	d1...dk
[Range]	$0x00 \leq d \leq 0xFF$ $k = (pL + pH \times 256) - 3$ <ul style="list-style-type: none">• QRcode barcode only with binary characters (8 bit): $4 \leq (pL + pH \times 256) \leq 2957$ ($0x00 \leq pL \leq 0xFF$, $0x00 \leq pH \leq 0x0B$)• QRcode barcode only with alphanumeric characters: $4 \leq (pL + pH \times 256) \leq 4300$ ($0x00 \leq pL \leq 0xFF$, $0x00 \leq pH \leq 0x10$)• QRcode barcode only with numeric characters: $4 \leq (pL + pH \times 256) \leq 7093$ ($0x00 \leq pL \leq 0xFF$, $0x00 \leq pH \leq 0x1B$)									
[Description]	Store the data (d1...dk) in the barcode save area for printing in QRcode format.									
[Notes]	<ul style="list-style-type: none">• Data stored in the barcode save area by this function are processed by Function 181 and then reserved.• pL and pH specify the number of successive bytes to be sent.• k bytes of d1...dk are processed as barcode data.• Specify only the data code word of the barcode with this function.									
[Default]										
[Reference]	0x1D 0x28 0x6B									
[Example]										

0x1D 0x28 0x6B [Fn 181]

<GS (k>

Prints the data stored in the barcode save area in QRcode format

Valid for	MODUS3 X								
	MODUS3 X Presenter								
[Format]	Hex	1D	28	6B	pL	pH	31	51	31
	ASCII	GS	(k	pL	pH	1	Q	1
[Range]	(pL + pH × 256) = 3 (pL = 0x03, pH = 0x00)								
[Description]	Prints the data stored in the barcode save area in QRcode format.								
[Notes]	pL and pH specify the number of successive bytes to be sent.								
[Default]									
[Reference]	0x1D 0x28 0x6B								
[Example]									

0x1D 0x28 0x6B [Fn 182]

<GS (k>

Transmit the QRcode barcode size in the barcode save area

Valid for	MODUS3 X								
	MODUS3 X Presenter								

[Format]	Hex	1D	28	6B	pL	pH	31	52	30
	ASCII	GS	(k	pL	pH	1	R	0

[Range]	(pL+pH × 256) = 3 (pL = 0x03, pH = 0x00)								
---------	--	--	--	--	--	--	--	--	--

[Description]	Transmits the QRcode barcode size in the barcode save area.								
---------------	---	--	--	--	--	--	--	--	--

- [Notes]
- To store the data in the device barcode save area use the [Function 180](#).
 - In standard mode, use this function when device is at the beginning of a line or when there is no data in the print buffer.
 - pL and pH specify the number of successive bytes to be sent.
 - The size information for each data is as follows:

SEND DATA	HEX	DATA
Header	37	1 byte
Identifier	36	1 byte
Horizontal size ⁽¹⁾	30-39	1 - 5 byte
Separator	1F	1 byte
Vertical size ⁽¹⁾	30-39	1 - 5 byte
Separator	1F	1 byte
Fixed value	31	1 byte
Separator	1F	1 byte
Other information ⁽²⁾	30 or 31	1 byte
NUL	00	1 byte

(1) "Horizontal size" and "vertical size" indicate the number of dots of the symbol.

The values of the vertical size and horizontal size are converted to characters and sent starting from the high order end (ex: When horizontal size is 120 dots, horizontal size is 0x31 0x32 0x30, which is 3 bytes of data).

(2) "Other information" indicates whether printing of the data in the symbol storage area is possible or impossible. The "Other information" is the following:

HEX	CONDITION
30	Printing is possible
31	Printing is impossible

- Size information indicates size of symbol that is printed by [Function 181](#).
- The quiet zone is not included in the size information.
- If “other information” is “Printing is impossible“(0x31), use one of the solutions shown below:

CAUSE	SOLUTION
There are data in the print buffer in the standard mode	Clear the data in the print buffer by executing 0x0A , 0x0D , 0x1B 0x4A print commands.
Symbol is bigger than the current print area.	Expand the print area by 0x1D 0x57 , 0x1B 0x24 . Reduce the module size by using Function 167 . Lower the error correction level by using Function 169 .
The data in the symbol storage area is too large.	Send correct data by using Function 180 . Lower the error correction level by using Function 169 .
There is no data in the symbol storage area.	Send data to the symbol storage area by using Function 180 .

[Default]

<GS (k>

Encodes the data in the barcode save area and prints it in two-dimensional GS1 Databar format

Valid for	MODUS3 X MODUS3 X Presenter								
Format]	Hex	1D	28	6B	pL	pH	33	51	30
	ASCII	GS	(k	pL	pH	3	Q	0
[Range]	(pL+pH × 256) = 3 (pL = 0x03, pH = 0x00)								
[Description]	Encodes the data in the barcode save area and prints it in two-dimensional GS1 Databar format.								
[Notes]	<ul style="list-style-type: none"> • Data stored in the barcode save area are processed by Function 380. • In standard mode, use this function when printer is “at the beginning of a line” or “there is no data in the print buffer”. • pL and pH specify the number of successive bytes to be sent. • A barcode that size exceeds the printing area cannot be printed. • If there is any error described below in the data of the barcode save area, it cannot be printed. <ul style="list-style-type: none"> - There is no data (Function 380 is not processed). - When there is a problem with the amount of data saved in the barcode save area. - When the data saved in the barcode save area includes data outside the domain. • Printing of symbol is not affected by print mode (emphasized, double-strike, underline, white/ black reverse printing, or 90° clockwise-rotated), except for character size and upside-down print mode. • In standard mode, this command executes paper feeding for the amount needed for printing the symbol, regardless of the paper feed amount set by the paper feed setting command. The print position returns to the left side of the printable area after printing the symbol, and printer is in the status “beginning of the line,” or “there is no data in the print buffer. • In page mode, the printer stores the symbol data in the print buffer without executing actual printing. The printer moves print position to the next dot of the last data of the symbol. • The quiet zone is not included in the printing data. Be sure to include the quiet zone when using this function. • Applied to GS1 Databar Stacked and GS1 Databar Stacked Omnidirectional. The data shown below is added automatically in encoding: <ul style="list-style-type: none"> - Application identifier (AI): The AI is ‘01’; - Check digit (1 character); - Guard pattern and separator pattern. • Applied to GS1 Databar Expanded Stacked. The data shown below is added automatically in encoding: <ul style="list-style-type: none"> - Guard pattern, finder pattern and separator pattern; • For encoding, the width of the symbol is decided by the setting value of Function 371 of this command (nL + nH x 256) and the current printing area. <ul style="list-style-type: none"> - When (nL + nH = 256) = 0x00, the width of the symbol is the current printing area. - When (nL + nH 256) is not 0x00 is specified and the setting value is greater than the current printing area, the width of the symbol is the current printing area. - In cases other than above, (nL + nH x 256) is the width of the symbol. 								

[Default]

[Reference] 0x1D 0x28 0x6B

[Example]

0x1D 0x28 0x6B [Fn 382]

<GS (k>

Transmit the two-dimensional GS1 Databar barcode size in the barcode save area

Valid for	MODUS3 X MODUS3 X Presenter								
[Format]	Hex	1D	28	6B	pL	pH	33	52	30
	ASCII	GS	(k	pL	pH	3	R	0
[Range]	(pL+pH × 256) = 3 (pL = 0x03, pH = 0x00)								
[Description]	Transmits the two-dimensional GS1 Databar barcode size in the barcode save area.								
[Notes]	<ul style="list-style-type: none"> To store the data in the device barcode save area use the Function 380. In standard mode, use this function when device is at the beginning of a line or when there is no data in the print buffer. pL and pH specify the number of successive bytes to be sent. Size information of this command shows the size of the symbol which is printed with Function 381. The size information for each data is as follows: 								

SEND DATA	HEX	DATA
Header	37	1 byte
Identifier	4F	1 byte
Horizontal size ⁽¹⁾	30-39	1 - 5 byte
Separator	1F	1 byte
Vertical size ⁽¹⁾	30-39	1 - 5 byte
Separator	1F	1 byte
Fixed value	31	1 byte
Separator	1F	1 byte
Other information ⁽²⁾	30 or 31	1 byte
NUL	00	1 byte

(1) "Horizontal size" and "vertical size" indicate the number of dots of the symbol.

The decimal value of the vertical size and horizontal size is converted to text data and sent starting from the high order end. (ex: When horizontal size is 120 dots, horizontal size is "120" (0x31, 0x32, and 0x30), which is 3 bytes of data.

(2) "Other information" indicates whether printing of the data in the symbol storage area is possible or impossible. The "Other information" is the following:

HEX	CONDITION
30	Printing is possible
31	Printing is impossible

- Size information indicates size of symbol that is printed by [Function 381](#).
- The quiet zone is not included in the size information.
- If “other information” is “Printing is impossible”(0x31), use one of the solutions shown below:

CAUSE	SOLUTION
There are data in the print buffer in the standard mode	Put the printer in the “there is no data in the print buffer” status by executing 0x0A , 0x0D , 0x1B 0x4A print commands..
Symbol is bigger than the current print area.	Expand the print area by 0x1D 0x57 , 0x1B 0x24 . Reduce the module size by using Function 367 .
There is a problem with the amount of data or with the data of the symbol data	Send correct data by using Function 380 .
There is no data in the symbol storage area.	Send data to the symbol storage area by using Function 380 .

<GS H>

Select printing position of Human Readable Interpretation (HRI) characters

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
-----------	--	--	--	--

[Format]	Hex	1D	48	n
	ASCII	GS	H	n

[Range]	0x00 ≤ n ≤ 0x03 0x30 ≤ n ≤ 0x33
---------	------------------------------------

[Description]	Selects the printing position of HRI characters when printing barcodes. n selects the printing positions as follows:
---------------	--

n	FUNCTION
0x00, 0x30	Not printed
0x01, 0x31	Above the barcode
0x02, 0x32	Below the barcode
0x03, 0x33	Both above and below the barcode

[Notes]

[Default]	n = 0x00
-----------	----------

[Reference]	0x1D 0x6B
-------------	-----------

[Example]

Not printed

Above the barcode

ABCDEFGH123456

Below the barcode

ABCDEFGH123456

Both above and below
the barcode

0x1D 0x66

<GS f>

Select font for HRI characters

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
-----------	--	--	--	--

[Format]	Hex	1D	66	n
	ASCII	GS	f	n

[Range] n = 0x00, 0x01, 0x30, 0x31

[Description] Selects a font for the HRI characters used when printing a barcode. n selects a font from the following table:

n	FONT
0x00, 0x30	Font A
0x01, 0x31	Font B

[Notes] HRI characters are printed at the position specified by 0x1D 0x48.

[Default] n = 0x00

[Reference] 0x1D 0x48, 0x1D 0x6B

[Example]

0x1D 0x68

0x5A	CODE32	$0x08 \leq n \leq 0x09$	$0x30 \leq d \leq 0x39$

[Notes]

- If d is outside of the specified range, the printer prints the following message: "BARCODE GENERATOR IS NOT OK!" and processes the data which follows as normal data.
- If the horizontal size exceeds the printing area, the printer only feeds the paper.
- This command feeds as much paper as is required to print the barcode, regardless of the line spacing.
- After printing the barcode, this command sets the print position to the beginning of the line.
- This command is not affected by print modes (bold, double-strike, underline or character size), except for upside-down and justification mode.

Format 1:

- This command ends with a NUL code.
- When the barcode system used is UPC-A or UPC-E, the printer prints the barcode data after receiving 11 (without check digit) or 12 (with check digit) bytes barcode data.
- When the barcode system used is EAN13, the printer prints the barcode data after receiving 12 (without check digit) or 13 (with check digit) bytes barcode data.
- When the barcode system used is EAN8, the printer prints the barcode data after receiving 7 (without check digit) or 8 (with check digit) bytes barcode data.
- The number of data for ITF barcode must be even numbers. When an odd number of data is input, the printer ignores the last received data.

Format 2:

- If n is outside of the specified range, the printer stops command processing and processes the following data as normal data.

When CODE93 is used the device:

- prints an HRI character (o) as a start character at the beginning of the HRI character string
- prints an HRI character (o) as a stop character at the end of the HRI character string.

- The printer prints an HRI character (n) as a control character (0x00 to 0x1F and 0x7F).

When CODE128 is used:

- When using CODE128 in this printer, please note the following regarding data transmission:
- The top part of the barcode data string must be a code set selection character (CODE A, CODE B or CODE C) which selects the first code set.
- Special characters are defined by combining two characters “{” and one character. ASCII character “{” is defined by transmitting “{” twice, consecutively.

SPECIFIC CHARACTER	DATA TRANSMISSION	
	ASCII	HEX
SHIFT	{S	7B, 53
CODE A	{A	7B, 41
CODE B	{B	7B, 42
CODE C	{C	7B, 43
FNC1	{1	7B, 31
FNC2	{2	7B, 32
FNC3	{3	7B, 33
FNC4	{4	7B, 34
{‘	{{	7B, 7B

When UPC-E is used, introducing the barcode characters, the device prints:

TRANSMITTED DATA											PRINTED DATA					
d1	d2	d3	d4	d5	d6	d7	d8	d9	d10	d11

[Example]

Format 1: Example for printing a CODE39 barcode
0x1D 0x6B 0x04 0x54 0x45 0x53 0x54 0x00

Format 2: Example for printing a CODE39 barcode
0x1D 0x6B 0x45 0x04 0x54 0x45 0x53 0x54

0x1D 0x77

<GS w>

Set barcode width

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
-----------	--	--	--	--

[Format]	Hex	1D	77	n
	ASCII	GS	w	n

[Range]	0x01 ≤ n ≤ 0x06 0x81 ≤ n ≤ 0x86
---------	------------------------------------

[Description]	Sets the horizontal size of the barcode. The parameter n specifies the barcode width (referred to the narrow bar) as follows:
---------------	--

n	MODULE WIDTH (mm)
0x01, 0x81	0.125
0x02, 0x82	0.25
0x03, 0x83	0.375
0x04, 0x84	0.5
0x05, 0x85	0.625
0x06, 0x86	0.75

Based on the value of n, the wide and narrow bar ratio is the following:

	n	WIDE / NARROW BAR RATIO
If n < 0x80	0x01, 0x02, 0x03, 0x04, 0x05, 0x06	3 : 1
	0x81	3 : 1
	0x82	2.5 : 1
If n > 0x80	0x83	2.33 : 1
	0x84	2.25 : 1
	0x85	3 : 1
	0x86	3 : 1

[Notes]

[Default] n = 0x03

[Reference]

0x1D 0x6B

[Example]

n = 0x01

n = 0x03

CHARACTER COMMANDS

0x1B 0x20

<ESC SP>

Set right-side character spacing

Valid for	MODUS3
	MODUS3 Presenter
	MODUS3 X
	MODUS3 X Presenter

[Format]	Hex	1B	20	n
	ASCII	ESC	SP	n

[Range] $0x00 \leq n \leq 0xFF$

[Description] Sets the character spacing for the right side of the character to [n x horizontal or vertical motion units].

[Notes]

- The right character spacing for double-width mode is twice the normal value. When the characters are enlarged, the right side character spacing is m (2 or 8) times the normal value.
- The horizontal and vertical motion units are specified by 0x1D 0x50. Changing the horizontal or vertical motion units does not affect the current right side spacing.
- The 0x1D 0x50 command can change the horizontal (and vertical) motion unit. However, the value cannot be less than the minimum horizontal movement amount.
- The maximum right side character spacing is 32 mm.

[Default] n = 0x00

[Reference] 0x1D 0x50

[Example]

Character spacing x0
0x1B 0x20 0x00

Character spacing x2
0x1B 0x20 0x02

Character spacing x4
0x1B 0x20 0x04

Character spacing x8
0x1B 0x20 0x08

0x1B 0x21

<ESC !>

Set printing mode

Valid for	MODUS3
	MODUS3 Presenter
	MODUS3 X
	MODUS3 X Presenter

[Format]	Hex	1B	21	n
	ASCII	ESC	!	n

[Range]	$0x00 \leq n \leq 0xFF$
---------	-------------------------

[Description]	Selects printing mode using n (see tables below):
---------------	---

BIT	OFF/ON	n	FUNCTION	13/17 dpi	17/22 dpi
0	Off	0x00	Character font A selected	16 x 24	12 x 24
	On	0x01	Character font B selected	12 x 24	9 x 24
1	-	-	Undefined		
2	-	-	Undefined		
3	Off	0x00	Bold mode not selected		
	On	0x08	Bold mode selected		
4	Off	0x00	Double-height mode not selected		
	On	0x10	Double-height mode selected		
5	Off	0x00	Double-width mode not selected		
	On	0x20	Double-width mode selected		
6	Off	0x00	Italic mode not selected		
	On	0x40	Italic mode selected		
7	Off	0x00	Underline mode not selected		
	On	0x80	Underline mode selected		

[Notes]	<ul style="list-style-type: none"> • The printer can underline all characters, but cannot underline the spaces set by 0x09, 0x1B 0x24, 0x1B 0x5C and 90°/270° rotated characters. • This command resets the left and right margin at default value (see 0x1D 0x4C, 0x1D 0x57). • 0x1B 0x45 can also be used to turn the bold mode on or off. However, the last-received setting command is the effective one. • 0x1B 0x2D can also be used to turn the underlining mode on or off. However, the last-received setting command is the effective one. • 0x1D 0x21 can also be used to select character height or width. However, the last-received setting command is the effective one. • 0x1B 0x34 can also be used to turn the italic mode on or off. However, the last-received setting command is the effective one.
---------	---

- Commands that change the height and width of characters are effective on the x and y axes. In case of 90°/270° rotated characters, command 0x1B 0x21 0x10 selects double-width mode and command 0x1B 0x21 0x20 selects double-height mode.

[Default]

n = 0x00

Enable or disable user-defined characters

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
[Format]	Hex	1B	25	n
	ASCII	ESC	%	n
[Range]	n = 0x00, 0x01			
[Description]	Enables or disables the user-defined character set. <ul style="list-style-type: none">• When n is 0, the user-defined character set is disabled.• When n is 1, the user-defined character set is enabled.			
[Notes]	When the user-defined character set is disabled, the internal character set is automatically selected.			
[Default]	n = 0x00			
[Reference]	<u>MODUS3 X, MODUS3 X Presenter</u> 0x1B 0x26, 0x1B 0x3F			
[Example]				

0x1B 0x26

<ESC &>

Defines user-defined characters

Valid for	MODUS3 X MODUS3 X Presenter						
[Format]	Hex	1B	26	y	c1	cn	x1[d0...dk] ... xn[d0...dk]
	ASCII	ESC	&	y	c1	cn	x1[d0...dk] ... xn[d0...dk]
[Range]	y = 0x03 $0x20 \leq c1 \leq cn \leq 0x7E$ $0x00 \leq x \leq 0x12$ (font 18 x 24) $0x00 \leq x \leq 0x18$ (font 24 x 24) $0x00 \leq x \leq 0x0E$ (font 14 x 24) $0x00 \leq x \leq 0x0A$ (font 10 x 24) $0x00 \leq x \leq 0x08$ (font 8 x 24) $0x00 \leq d0...dk \leq 0xFF$ $k = cn - c1 + 1$						
[Description]	Defines user programmable characters. y specifies the number of bytes in the vertical direction. c1 specifies the start character code and cn specifies the final character code of the characters map area. x specifies the width, in number of columns, of the character you want to replace. Its value can be from 0 to the dot width of the character. d0...dk specifies the new character definition.						
[Notes]	<ul style="list-style-type: none"> It is possible to define multiple characters for consecutive character codes. If only one character is desired, use $c1 = cn$. if $cn < c1$, the command is not executed. d is the dot data for the characters. The dot pattern is in the horizontal direction starting from the left. Any remaining dots on the right remain blank. The data to define a user-defined character is $(x \times y)$ bytes. To print a dot, set the corresponding bit to 1; to not have it print, set to 0. This command can define different user-defined character patterns for each font. To select the font, use 0x1B 0x21. The user programmable character definitions are cleared when commands 0x1B 0x40, 0x1D 0x2A or 0x1B 0x3F are executed or the device is reset or turned off. x1 [d0 ... dk] will be repeated for each character to be replaced. if $c1=cn = 0x80$ and $0x00 \leq x \leq 0x18$ (font 24x24), the command function only if the "Chinese GB18030" font type has been selected using the 0x1C 0x25 command. 						
[Default]	Internal character set						
[Reference]	0x1B 0x25 , 0x1B 0x3F , 0x1C 0x25						

[Example]

To replace only the “A” character of the 11 cpi font table (font 18x24), the command sequence is:
0x1B 0x26 0x03 0x41 0x41 0x10 [48 bytes of the new character definition].

To replace “A” and “B” characters of the 11 cpi font table (font 18x24), the command sequence is:
0x1B 0x26 0x03 0x41 0x42 0x10 [48 bytes of the new character definition] 0x10 [48 bytes of the new character definition].

To replace the 0x80 character of the 8 cpi font table (font 24x24), the command sequence is:
0x1B 0x26 0x03 0x80 0x80 0x18 [72 bytes of the new character definition].

0x1B 0x2D

<ESC ->

Turn underline mode on/off

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
-----------	--	--	--	--

[Format]	Hex	1B	2D	n
	ASCII	ESC	-	n

[Range]	$0x00 \leq n \leq 0x02$ $0x30 \leq n \leq 0x32$
---------	--

[Description] Turns underline mode on or off, based on the following values of n:

n	FUNCTION
0x00, 0x30	Turns off underline mode
0x01, 0x31	Turns on underline mode (1 dot thick)
0x02, 0x32	Turns on underline mode (2 dot thick)

[Notes]

- The device can underline all characters, but cannot underline the space and right-side character spacing (command [0x09](#)).
- The device cannot underline 90°/270° rotated characters and white/black inverted characters.
- When underline mode is turned off by setting the value of n to 0x00 or 0x30, the data which follows is not underlined.
- Underline mode can also be turned on or off by using [0x1B 0x21](#). However, the last-received setting command is the effective one.

[Default] n = 0x00

[Reference] [0x1B 0x21](#)

[Example]

0x1B 0x34

<ESC 4>

Turn italic mode on/off

Valid for	MODUS3			
	MODUS3 Presenter			
	MODUS3 X			
	MODUS3 X Presenter			

[Format]	Hex	1B	34	n
	ASCII	ESC	4	n

[Range]	$0x00 \leq n \leq 0x01$
	$0x30 \leq n \leq 0x31$

[Description] Turns italic mode on or off, based on the following values of n:

n	FUNCTION
0x00, 0x30	Turns off italic mode
0x01, 0x31	Turns on italic mode

- [Notes]
- The device can print any character in italic mode.
 - When italic mode is turned off by setting the value of n to 0x00 or 0x30, the data which follows is printed in normal mode.
 - Italic mode can also be turned on or off using 0x1B 0x21. However, the last-received setting command is the effective one.

[Default] n = 0x00

[Format]	Hex	1B	C1	n
	ASCII	ESC	0xC1	n

[Range]	MODUS3, MODUS3 Presenter n = 0x00, 0x01, 0x30, 0x31			
	MODUS3 X, MODUS3 X Presenter n = 0x00, 0x01, 0x02, 0x30, 0x31, 0x32			

[Description]	This command selects the character pitch expressed in cpi (characters per inch) based on the following values of n:
---------------	---

MODUS3, MODUS3 Presenter		
n	PITCH	
0x00, 0x30	Font A = 13 cpi	Font B = 17 cpi
0x01, 0x31	Font A = 17 cpi	Font B = 22 cpi

MODUS3 X, MODUS3 X Presenter		
n	PITCH	
0x00, 0x30	Font A = 11 cpi	Font B = 15 cpi
0x01, 0x31	Font A = 15 cpi	Font B = 20 cpi
0x02, 0x32	Font A = 20 cpi	Font B = 25 cpi

[Notes]	
[Default]	n = 0x00
[Reference]	0x1B 0x21

[Example]

MODUS3, MODUS3 Presenter

MODUS3 X, MODUS3 X Presenter

0x1C 0x25

<FS %>

Select the font type

Valid for	MODUS3			
	MODUS3 Presenter			
	MODUS3 X			
	MODUS3 X Presenter			

[Format]	Hex	1C	25	n
	ASCII	FS	%	n

[Range] n = 0x00, 0x01, 0x02

[Description] Select the font type based on the value of n as follows:

n	FONT TYPE
0x00	International
0x01	Chinese GB18030
0x02	Korean PC949

[Notes]

- This command can be used only for the models with Extended Chinese font (GB18030) or Korean font (PC949).
- The selection made by this command is stored in the RAM memory. Turning off the device reverts to the default value, that can be set with the “Font type” parameter during the setup procedure (refer to the user manual of the device).
- After selecting the font type “International” it must be selected the desired character code table using the command [0x1B 0x74](#).

[Default] n = 0x00

[Reference] [0x1B 0x74](#), see the Chinese fonts management commands manual.

[Example]

0x1D 0x21

<GS !>

Select character size

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
-----------	--	--	--	--

[Format]	Hex	1D	21	n
	ASCII	GS	!	n

[Range]	0x00 ≤ n ≤ 0x07
	0x10 ≤ n ≤ 0x17
	0x20 ≤ n ≤ 0x27
	0x30 ≤ n ≤ 0x37
	0x40 ≤ n ≤ 0x47
	0x50 ≤ n ≤ 0x57
	0x60 ≤ n ≤ 0x67
	0x70 ≤ n ≤ 0x77

[Description]	<p>Selects character height and width, as follows:</p> <ul style="list-style-type: none"> • Bits 0 to 3: to select character height (see table 2). • Bits 4 to 7: to select character width (see table 1).
---------------	--

Table 1 Select character width

HEX	WIDTH
00	1 (normal)
10	2 (width = 2x)
20	3 (width = 3x)
30	4 (width = 4x)
40	5 (width = 5x)
50	6 (width = 6x)
60	7 (width = 7x)
70	8 (width = 8x)

Table 2 Select character height

HEX	HEIGHT
00	1 (normal)
01	2 (height = 2x)
02	3 (height = 3x)
03	4 (height = 4x)
04	5 (height = 5x)
05	6 (height = 6x)
06	7 (height = 7x)
07	8 (height = 8x)

[Notes]	<ul style="list-style-type: none"> • This command is effective for all characters (except HRI characters). • If n falls outside the defined range, this command is ignored. • Characters enlarged to different heights on the same line are aligned at the baseline. • 0x1B 0x21 can also be used to select character size. However, the setting of the last received command is the effective one. • This command is effective on the x and y axes. In case of 90°/270° rotated characters, bit from 0 to 3 select character width and bit from 4 to 7 select character height.
---------	---

[Default]	n = 0x00
[Reference]	0x1B 0x21
[Example]	For printing a character with 6x width and height the command sequence is: 0x1D 0x21 0x55

0x1D 0x42

<GS B>

Turn white/black reverse printing mode on/off

Valid for	MODUS3			
	MODUS3 Presenter			
	MODUS3 X			
	MODUS3 X Presenter			
[Format]	Hex	1D	42	n
	ASCII	GS	B	n
[Range]	$0x00 \leq n \leq 0xFF$			
[Description]	<p>Turns white/black reverse printing mode on or off.</p> <ul style="list-style-type: none">• When the LSB of n is 0, white/black reverse printing is turned off.• When the LSB of n is 1, white/black reverse printing is turned on.			
[Notes]	<ul style="list-style-type: none">• Only the LSB of n is effective.• This command is available for both built-in and user-defined characters.• This command does not affect bit image, downloaded bit image, barcode, HRI characters and spacing skipped by 0x09, 0x1B 0x24 and 0x1B 0x5C.• This command does not affect white space between lines.• White/black reverse mode has a higher priority than underline mode. Even if underline mode is on, it will be disabled (but not cancelled) when white/black reverse mode is selected.			
[Default]	n = 0x00			
[Reference]				
[Example]				

Reverse printing mode off
0x1D 0x42 0x00

ABCDEFGH
1 2 3 4 5 6

Reverse printing mode on
0x1D 0x42 0x01

ABCDEFGH
1 2 3 4 5 6

LINE SPACING COMMANDS

0x1B 0x30

<ESC 0>

Select 1/8-inch line spacing

Valid for	MODUS3		
	MODUS3 Presenter		
	MODUS3 X		
	MODUS3 X Presenter		

[Format]	Hex	1B	30
	ASCII	ESC	0

[Range]

[Description] Selects 1/8-inch line spacing.

[Notes]

[Default]

[Reference] [0x1B 0x32](#), [0x1B 0x33](#)

[Example]

0x1B 0x32

<ESC 2>

Select 1/6-inch line spacing

Valid for	MODUS3		
	MODUS3 Presenter		
	MODUS3 X		
	MODUS3 X Presenter		

[Format]	Hex	1B	32
	ASCII	ESC	2

[Range]

[Description] Selects 1/6-inch line spacing.

[Notes]

[Default]

[Reference] [0x1B 0x30](#), [0x1B 0x33](#)

[Example]

0x1B 0x33

<ESC 3>

Set line spacing using minimum units

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
[Format]	Hex	1B	33	n
	ASCII	ESC	3	n
[Range]	0x00 ≤ n ≤ 0xFF			
[Description]	Sets line spacing to [n × vertical or horizontal motion unit].			
[Notes]	<ul style="list-style-type: none">• The horizontal and vertical motion unit are specified by 0x1D 0x50. Changing the horizontal or vertical motion unit does not affect the current line spacing.• The 0x1D 0x50 command can change the horizontal (and vertical) motion unit. However, the value cannot be less than the minimum vertical movement amount.			
[Default]	n = 0x40 (1/6-inch)			
[Reference]	0x1B 0x32, 0x1D 0x50			
[Example]				

PRINT COMMANDS

0x0A

<LF>

Print and line feed

Valid for	MODUS3	
	MODUS3 Presenter	
	MODUS3 X	
	MODUS3 X Presenter	

[Format]	Hex	0A
	ASCII	LF

[Range]

[Description] This command sets the print position to the beginning of the line printing the data in the buffer and feeding one line based on the line spacing set with the command 0x1B 0x30 or 0x1B 0x32.

[Notes] If the buffer is empty, the printing feeds of a value equal to the sum of the character height and line spacing.

[Default] 1/6-inch (32 dots)

[Reference] 0x1B 0x30, 0x1B 0x32, 0x1B 0x33, 0x0D

[Example]

To print the receipt shown in figure the command sequence is:
ABCDEFGH 0x0A 123456 0x0A

0x0D

<CR>

Print and carriage return

Valid for	MODUS3	
	MODUS3 Presenter	
	MODUS3 X	
	MODUS3 X Presenter	

[Format]	Hex	0D
	ASCII	CR

[Range]

[Description] This command handles the end of a line text.

[Notes] If “Autofeed” setup parameter is set to “CR enabled”, this command works in the same way as 0x0A, otherwise it is disregarded.

[Default] See “Autofeed” setup parameter (refer to the user manual of the device).

[Reference] 0x0A

[Example]

To print the receipt shown in figure the command sequence is:
ABCDEFGH 0x0D 123456 0x0D

0x1B 0x4A

<ESC J>

Print and paper feed

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
[Format]	Hex	1B	4A	n
	ASCII	ESC	J	n
[Range]	$0x00 \leq n \leq 0xFF$			
[Description]	Prints the data in the print buffer and feeds the paper [n × vertical or horizontal motion unit].			
[Notes]	<ul style="list-style-type: none">• After printing has been completed, this command sets the print starting position to the beginning of the line.• The paper feed amount set by this command does not affect the values set by 0x1B 0x32 or 0x1B 0x33 0x1B 0x33.• The horizontal and vertical motion units are specified by 0x1D 0x50.• 0x1D 0x50 can change the vertical (and horizontal) motion unit. However, the value cannot be less than the minimum vertical movement amount.			
[Default]				
[Reference]	0x1B 0x32, 0x1B 0x33, 0x1D 0x50			
[Example]				

0x1B 0x64

<ESC d>

Print and feed paper n lines

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
[Format]	Hex	1B	64	n
	ASCII	ESC	d	n
[Range]	0x00 ≤ n ≤ 0xFF			
[Description]	Prints the data in the print buffer and feeds the paper n lines.			
[Notes]	<ul style="list-style-type: none">• n rows paper feed is equivalent to (n × char height + line spacing set).• Sets the print starting position at the beginning of the line.• This command does not affect the line spacing set by 0x1B 0x32 or 0x1B 0x33.• The maximum paper feed amount is 254 lines. Even if a paper feed amount of more than 254 lines is set, the printer feeds the paper only 254 lines.			
[Default]				
[Reference]	0x1B 0x32, 0x1B 0x33			
[Example]				

0x1B 0xFF

Receive the graphic page from the communication port

Valid for	MODUS3					
	MODUS3 Presenter					
	MODUS3 X					
	MODUS3 X Presenter					

[Format]	Hex	1B	FF	n	nL	nH
	ASCII	ESC	0xFF	n	nL	nH

[Range]	n = 0x01
	0x00 ≤ nL, nH ≤ 0xFF

[Description]	Receive [nL + (nH × 256)] word from the communication port and save them in the flash bank specified by n as shown in the following table:
---------------	--

n	FUNCTION
0x01	Save logo in the flash bank 1

[Notes]	• For serial communication, set “RS232 handshaking” setup parameter to “Hardware” (refer to the user manual of the device).
	• The number of received data bytes is [nL + (nH × 256)] × 2.
	• Every word is received first as MSB (Most Significant Byte) and then as LSB (Least Significant Byte).
	• In the horizontal dotline there are 40 words.
	• If [nL + (nH × 256)] is more than 32720, the following data are processed as normal data.
	• The flash bank for graphic print dimensions are: 640 × 409 pixels (32720 bytes).

[Default]

[Reference]

[Example]

0x1D 0x7C

<GS |>

Set printing density

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
-----------	--	--	--	--

[Format]	Hex	1D	7C	n
	ASCII	GS		n

[Range]	0x02 ≤ n ≤ 0x06 0x32 ≤ n ≤ 0x36
---------	------------------------------------

[Description] Sets printing density based on the value of n as follows:

n	PRINTING DENSITY
0x02, 0x32	- 25%
0x03, 0x33	- 12.5%
0x04, 0x34	0%
0x05, 0x35	+ 12.5%
0x06, 0x36	+ 25%

[Notes] Printing density reverts to the default value when the device is reset or turned off.

[Default] n = 0x04

[Reference]

[Example]

STATUS COMMAND

0x10 0x04

<DLE EOT>

Real-time status transmission

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter
-----------	--

[Format]	Hex	10	04	n
	ASCII	DLE	EOT	n

[Range]	$0x01 \leq n \leq 0x04$; $n = 0x14$
---------	--------------------------------------

[Description]	Transmits the selected device status specified by n in real time according to the following parameters: n = 0x01 transmit device status n = 0x02 transmit off-line status n = 0x03 transmit error status n = 0x04 transmit paper roll sensor status n = 0x14 transmit full status
---------------	---

n = 0x01: Device status

1	-	-	RESERVED
2	-	-	Undefined
3	-	-	Undefined
4	-	-	RESERVED
5	Off	00	Free paper path
	On	20	Paper jam
6	-	-	Undefined
7	-	-	RESERVED

[Notes] This command is executed immediately, even when the data buffer is full.

[Default]

[Reference]

[Example]

0x1B 0x76

<ESC v>

Transmit paper sensor status

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter		
-----------	--	--	--

[Format]	Hex	1B	76
	ASCII	ESC	v

[Range]

[Description] When this command is received, transmit the current status of the paper sensor. The status to be transmitted is shown in the table below:

BIT	OFF/ON	HEX	FUNCTION
0, 1	Off	00	Near paper end sensor: paper present
	On	03	Near paper end sensor: paper not present
2, 3	Off	00	Paper end sensor: paper present
	On	0C	Paper end sensor: paper not present
4	Off	00	Not used. Fixed to Off
5	-	-	Undefined
6	-	-	Undefined
7	Off	00	Not used. Fixed to Off

[Notes] This command is executed immediately, even when the data buffer is full (Busy).

[Default]

[Reference] [0x10 0x04](#)

[Example]

0x1C 0xEA

Transmit the device serial number

Valid for	MODUS3			
	MODUS3 Presenter			
	MODUS3 X			
	MODUS3 X Presenter			

[Format]	Hex	1C	EA	n
	ASCII	FS	0xEA	n

[Range] n = 0x52, 0x72

[Description] Transmits the device serial number.

[Notes]

- The serial number is a string of 16 alphanumeric characters.
- If the printer serial number is not defined, the device returns a string of 16 characters with a value of 0x00.

[Default]

[Reference]

[Example] To read the device serial number the command sequence is:
0x1C 0xEA 0x52

The device returns a string of 16 alphanumeric characters just like the following:
'ABC0123456789012'

0x1D 0x72

<GS r>

Transmit status

Valid for	MODUS3			
	MODUS3 Presenter			
[Format]	Hex	1D	72	n
	ASCII	GS	r	n
[Range]	n = 0x01, 0x31			
[Description]	Transmit paper sensor status (as for 0x1B 0x76).			
	This command is executed when the data is processed in the data buffer. Therefore, there may be a time lag between receiving the command and transmitting the status, depending on data buffer status.			
[Notes]				
[Default]				
[Reference]	0x10 0x04 , 0x1B 0x76			
[Example]				

0x1D 0xE0

Enable or disable automatic full status back

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter			
-----------	--	--	--	--

[Format]	Hex	1D	E0	n
	ASCII	GS	0xE0	n

[Range]	$0x00 \leq n \leq 0xFF$
---------	-------------------------

[Description]	Enable or disable automatic full status back. n specifies the composition of full status as follows:
---------------	--

BIT	OFF/ON	n (HEX)	FUNCTION
0	Off	00	Disable paper status
	On	01	Enable paper status
1	Off	00	Disable user status
	On	02	Enable user status
2	Off	00	Disable recoverable error status
	On	04	Enable recoverable error status
3	Off	00	Disable unrecoverable error status
	On	08	Enable unrecoverable error status
4	-	-	RESERVED
5	-	-	RESERVED
6	-	-	RESERVED
7	-	-	RESERVED

[Notes]	Once enable at least one byte of the full status, for each change of at least one of the bits which compose the required status, the status sent in automatic from the printer will be so composed as follows:
---------	--

1st Byte = 0x10

2nd Byte = n

[Default]

[Reference]	0x10 0x04
-------------	-----------

[Example]

0x1D 0xE1

Reading of length paper available before virtual paper-end

Valid for	MODUS3		
	MODUS3 Presenter		
	MODUS3 X		
	MODUS3 X Presenter		
[Format]	Hex	1D	E1
	ASCII	GS	0xE1
[Range]			
[Description]			
Reading of length paper available before virtual paper-end (expressed in centimetres). The command return a string pointing out how much paper is available.			
[Notes]			
<ul style="list-style-type: none">• The length of residual paper reported is just as an indication because tolerances and other factors are not taken into consideration (paper thickness, roll core diameter, roll core thickness).• The virtual paper-end limit is set by the command 0x1D 0xE6.• To set virtual paper-end limit, measure the length of the paper from low paper to the end of the roll, using several of them.			
[Default]			
[Reference]			
0x1D 0xE6			
[Example]			
If there are 5.1 m before paper end, the answer will be: '510cm'			

0x1D 0xE2

Reading number of cuts performed by the autocutter

Valid for	MODUS3		
	MODUS3 Presenter		
	MODUS3 X		
	MODUS3 X Presenter		
[Format]	Hex	1D	E2
	ASCII	GS	0xE2
[Range]			
[Description]			
Reading the number of cuts performed by the autocutter.			
[Notes]			
The command returns a string indicating how many cuts are performed by the autocutter.			
[Default]			
[Reference]			
[Example]			
If the autocutter has performed 785 cuts, the answer will be: '785cuts'			

0x1D 0xE3

Reading length of printed paper

Valid for	MODUS3		
	MODUS3 Presenter		
	MODUS3 X		
	MODUS3 X Presenter		
[Format]	Hex	1D	E3
	ASCII	GS	0xE3
[Range]			
[Description]			
Reading of length expressed in centimetre of printed paper.			
[Notes]			
The command returns a string indicating how much paper is printed.			
[Default]			
[Reference]			
[Example]			
If the device has printed about 388.9 m, the answer will be: '38890cm'			

0x1D 0xE5

Reading number of power up

Valid for	MODUS3		
	MODUS3 Presenter		
	MODUS3 X		
	MODUS3 X Presenter		
[Format]	Hex	1D	E5
	ASCII	GS	0xE5
[Range]			
[Description]			
Reading number of power up of the device.			
[Notes]			
The command returns a string indicating the number of device power ups.			
[Default]			
[Reference]			
[Example]			
If the device is turned on 512 times, the answer will be: '512on'			

BIT IMAGE COMMANDS

0x1B 0x2A

<ESC *>

Select image print mode

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter						
-----------	--	--	--	--	--	--	--

[Format]	Hex	1B	2A	m	nL	nH	d1...dk
	ASCII	ESC	*	m	nL	nH	d1...dk

[Range]	m = 0x00, 0x01, 0x20, 0x21 0x00 ≤ nL ≤ 0xFF 0x00 ≤ nH ≤ 0x03 0x00 ≤ d ≤ 0xFF
---------	---

[Description] Selects a bit image mode using m for the number of dots specified by nL and nH, as follows:

m	MODE	VERTICAL DIRECTION		HORIZONTAL DIRECTION	
		N. DOTS	DPI	DPI	N. DATA (k)
0x00	8 dots single density	8	67	100	nL + nH × 256
0x01	8 dots double density	8	67	200	nL + nH × 256
0x20	24 dots single density	24	200	100	(nL + nH × 256) × 3
0x21	24 dots double density	24	200	200	(nL + nH × 256) × 3

[Notes]	<ul style="list-style-type: none">• The nL and nH commands indicate the number of dots of the bit image in the horizontal direction. The number of dots is calculated using: nL + nH × 256.• If the bit image data input exceeds the number of dots to be printed on a line, the excess data is ignored.• d indicates the bit image data. Set a corresponding bit to 1 to print a dot, or to 0 to not print the dot.• If the value of m is outside the specified range, nL and data following it are processed as normal data.• If the width of the printing area set by 0x1D 0x4C and 0x1D 0x57 is less than the width required by the data set using 0x1B 0x2A, the excess data are ignored.• To print the bit image use 0x0A, 0x0D, 0x1B 0x4A or 0x1B 0x64.• After printing a bit image, the printer returns to normal data processing mode.• This command is not affected by the bold, double-strike, underline print modes, except for the upside-down mode.
---------	--

- The relationship between the image data and the dots to be printed is as follows:

8 dots bit image

24 dots bit image

[Default]

8 dots double density

24 dots single density

24 dots double density

0x1C 0x70

<FS p>

Print NV bit image

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter				
-----------	--	--	--	--	--

[Format]	Hex	1C	70	n	m
	ASCII	FS	p	n	m

[Range]	0x01 ≤ n ≤ 0xFF
	0x00 ≤ m ≤ 0x03
	0x30 ≤ m ≤ 0x33

[Description]	Print a NV bit image n using the mode specified by m as follows, when n is the number of the NV bit image.
---------------	--

m	MODE
0x00, 0x30	Normal
0x01, 0x31	Double width
0x02, 0x32	Double height
0x03, 0x33	Quadruple

[Notes]	<ul style="list-style-type: none"> NV bit image means a bit image which is defined in a non-volatile memory by 0x1C 0x71 and printed by 0x1C 0x70. This command is not effective when the specified NV bit image has not been defined. This command is not affected by print modes (bold, underline, character size, white/black reverse printing, etc.), except upside-down printing mode. If the printing area width set by 0x1D 0x4C 0x1D 0x4C and 0x1D 0x57 for the NV bit image is less than one vertical line, the following processing is executed only on the line in question. However, in NV bit image mode, one vertical line means 1 dot in normal mode (m = 0x00 or 0x30) and in double-height mode (m = 0x02 or 0x32), and it means 2 dots in double-width mode (m = 0x01, 0x31) and in quadruple mode (m = 0x03, 0x33). The printing area width is extended to the right in NV bit image mode up to one line vertically. In this case, printing does not exceed the printable area. If the printing area width cannot be extended by one line vertically, the left margin is reduced to accommodate one line vertically. If the downloaded bit image to be printed exceeds one line, the excess data is not printed. This command feeds dots (for the height n of the NV bit image) in normal and double-width modes, and (for the height n x 2 of the VN bit image) in double-height and quadruple modes, regardless of the line spacing specified by 0x1B 0x32 or 0x1B 0x33.
---------	---

- After printing the bit image, this command sets the print position to the beginning of the line and processes the data that follows as normal data.

[Default]

[Reference] 0x1C 0x71

[Example]

0x1C 0x71

<FS q>

Define NV bit image

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter					
[Format]	Hex	1C	71	n [xL xH yL yH d1...dk] 1...[xL xH yL yH d1...dk] n		
	ASCII	FS	q	n [xL xH yL yH d1...dk] 1...[xL xH yL yH d1...dk] n		
[Range]	0x01 ≤ n ≤ 0xFF 0x00 ≤ xL ≤ 0xFF 0x00 ≤ xH ≤ 0x03 (when 1 ≤ (xL + xH × 256) ≤ 1023) 0x00 ≤ yL ≤ 0x01 (when 1 ≤ (yL + yH × 256) ≤ 288) 0x00 ≤ d ≤ 0xFF k = (xL + xH × 256) × (yL + yH × 256) × 8 Total defined data area = 3 Mbits (384 kB)					
[Description]	Define the NV bit image specified by n. <ul style="list-style-type: none">• n specifies the number of the defined NV bit image.• xL, xH specifies (xL + xH × 256) × 8 dots in the horizontal direction for the NV bit image you are defining.• yL, yH specifies (yL + yH × 256) × 8 dots in the vertical direction for the NV bit image you are defining.					
[Notes]	<ul style="list-style-type: none">• Frequent write command execution may cause damage the NV memory. Therefore, it is recommended to write the NV memory 10 times or less a day.• The device executes a hardware reset after the procedure to place the image into the non-volatile memory. Therefore, user-defined characters, downloaded bit images, and macros should be defined only after completing this command. The device clears the receive and print buffers and resets the mode to the mode that was in effect at power on. <ul style="list-style-type: none">• During processing this command, the device is in BUSY when writing the data to the user NV memory and stops receiving data. Therefore it is prohibited to transmit the data including the real-time commands during the execution of this command.• This command cancels all NV bit images that have already been defined by this command. The device can not redefine only one of several data definitions previously defined. In this case, all data needs to be sent again. <ul style="list-style-type: none">• From the beginning of the processing of this command till the finish of hardware reset, mechanical operations (including initializing the position of the printer head when the cover is open, paper feeding by using the PAPER FEED button, etc.) cannot be executed.• NV bit image means a bit image which is defined in a non-volatile memory by 0x1C 0x71 and printed by 0x1C 0x70.					

- When the amount of data exceeds the capacity left in the range defined by xL, xH, yL, yH, the printer processes xL, xH, yL, yH out of the defined range.
- In the first group of NV bit images, when any of the parameters xL, xH, yL, yH is out of the definition range, this command is disabled.
- In groups of NV bit images other than the first one, when the printer processes xL, xH, yL, yH out of the defined range, it stops processing this command and starts writing into the non-volatile images. At this time, NV bit images that haven't been defined are disabled (undefined), but any NV bit images before that are enabled.
- The d indicates the definition data. In data (d) a 1 bit specifies a dot to be printed and a 0 bit specifies a dot not to be printed.
- This command defines n as the number of a NV bit image. Numbers rise in order from NV bit image 0x01. Therefore, the first data group [xL xH yL yH d1...dk] is NV bit image 0x01, and the last data group [xL xH yL yH d1...dk] is NV bit image n. The total agrees with the number of NV bit images specified by command [0x1C 0x70](#).
- A definition data of a NV bit image consists of [xL xH yL yH d1...dk]. Therefore, when only one NV bit image is defined, n = 0x01.
- The device processes a data group [xL xH yL yH d1...dk] once.
- The device uses $([data: (xL + xH \times 256) \times (yL + yH \times 256) \times 8] + [header :4])$ byte of non-volatile memory.
- The definition area in this printer is a maximum of 3 Mbits (384 kB). This command can define several NV bit images, but cannot define a bit image data whose total capacity [bit image data + header] exceeds 3 Mbits (384 kB).
- The device is busy immediately before writing into non-volatile memory.
- When this command is received during macro definition, the device ends macro definition, and begins executing this command.
- Once a NV bit image is defined, it is not erased by executing [0x1B 0x40](#) or when the device is reset or turned off.
- This command executes only definition of a NV bit image and does not execute printing. Printing of the NV bit image is executed by the [0x1C 0x70](#) command.

<ESC m>

Partial cut

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter		
[Format]	Hex ASCII	1B ESC	6D m
[Range]			
[Description]	This command enables partial cutter operation and executes a partial cut.		
[Notes]	<ul style="list-style-type: none">• The device waits to complete all paper movement commands before it executes a partial cut.• For the models with optional bezel this command executes a total cut, working in the same way as 0x1B 0x69.		
[Default]			
[Reference]	0x1B 0x69		
[Example]			

0x1C 0xC1

Paper recovery after cut

Valid for	MODUS3 Presenter		
	MODUS3 X Presenter		

[Format]	Hex	1C	C1	n
	ASCII	FS	0xC1	n

[Range]	$0x00 \leq n \leq 0x09$
---------	-------------------------

[Description]	Set the paper moving (in millimetres) toward the print head after the paper cut.
---------------	--

[Notes]	Set $n = 0x09$ to complete recover the paper.
---------	---

[Default]	$n = 0x00$
-----------	------------

ALIGNMENT COMMANDS

0x1D 0xE7

Set black mark distance

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter				
[Format]	Hex	1D	E7	nH	nL
	ASCII	GS	0xE7	nH	nL
[Range]	0x00 ≤ nH ≤ 0xFF 0x00 ≤ nL ≤ 0xFF				
[Description]	Sets black mark distance in tenths of millimeter of the alignment point from the edge of the black mark. This value is expressed as [(nH × 256)+nL] where: - if n ≤ 0x7F, the value will be positive - if n > 0x7F, the value will be negative				
[Notes]	<ul style="list-style-type: none">• The maximum value is 99.9 mm.• The minimum value is -5 mm.• The setting are saved in the EEPROM to keep the value when the device is turned off.• The distance defined by this command is the same that can be set with the value of the “Black Mark Distance” parameter during the setup procedure of the device (refer to the user manual of the device).				
[Default]	nH = 0x00 nL = 0x00				
[Reference]					
[Example]	To set a distance of the alignment point from the black mark equal to 8 mm = 80 tenths of millimeter, the command sequence is: 0x1D 0xE7 0x00 0x50 where: 0x00 defines the sign + 0x50 the absolute value defines the distance = 80 tenths of millimeter				

To set a distance of -5 mm, the command sequence is:

0x1D 0xE7 0x80 0x32

where:

0x80 defines the sign -

0x32 the absolute value defines the distance = 50 tenths of millimeter

The following image shows tickets with alignment point positioned at 8 mm and -5 mm from the black mark.

0x1D 0xF6

Align the ticket with the print head

Valid for	MODUS3		
	MODUS3 Presenter		
	MODUS3 X		
	MODUS3 X Presenter		

[Format]	Hex	1D	F6
	ASCII	GS	0xF6

[Descrizione] This command aligns the edge of the black mark to the alignment point (see chapter Alignment for further explanation).

[Notes]

- Use the command [0x1D 0xE7](#) to set an offset between the black mark and the point of alignment
- To work properly, the “Black Mark Alignment” parameter must be enabled during the setup procedure (refer to the user manual of the device).

[Default]

PRESENTER COMMANDS

0x1C 0x50

<FS P>

Presenter management

Valid for	MODUS3 Presenter				
	MODUS3 X Presenter				

[Format]	Hex	1C	50	a	b
	ASCII	FS	P	a	b

[Range] a = 0x00, 0x01
0x00 ≤ b ≤ 0xFF

[Description] This command cuts the paper and eject or present the ticket according to a value as described in the following table:

a	FUNCTION
0x00	Eject printed ticket
0x01	Present printed ticket

If a = 0x01, b indicates the timeout (in seconds) for the ticket ejection (0x01 = 1 second).

[Notes] If a = 0x01, parameter b must be > 0x00 or the ticket will be kept in hold.

[Default] a = 0x00

[Reference] [0x1D 0x65 0x12](#), [0x1D 0x65 0x14](#)

[Example] Example of direct ticket ejection:

0x1C 0x50 0x00 0x00

Example of ticket presentation with a 5 seconds timeout:

0x1C 0x50 0x01 0x05

0x1D 0x65 0x12

<GS e DC2>

Set LoopAway operation mode

Valid for	MODUS3 Presenter			
	MODUS3 X Presenter			
[Format]	Hex	1D	65	12
	ASCII	GS	e	DC2
[Range]				
[Description]	This command sets presenter LoopAway operation mode.			
[Notes]	<ul style="list-style-type: none"> • This operating mode is the default mode. • This operating mode remains active until the device is reset or until the command 0x1D 0x65 0x14 is sent. 			
[Default]				
[Reference]	0x1C 0x50 , 0x1D 0x65 0x14			
[Example]	The device starts the ticket printing.			

The ticket advances ahead to the presenter and is caught between the presenter rollers. While the device continues printing, the portion of the ticket already printed is collected on top of the device.

When printing ends, the device cuts the ticket printed.

The device presents a portion of the ticket printed on the bezel.

The user withdraw the ticket from the bezel.

0x1D 0x65 0x14

<GS e DC4>

Set FeedAway operation mode

Valid for	MODUS3 Presenter MODUS3 X Presenter			
[Format]	Hex ASCII	1D GS	65 e	14 DC4
[Range]				
[Description]	This command sets presenter FeedAway operation mode.			
[Notes]	This operating mode remains active until the device is reset or until the command 0x1D 0x65 0x12 is sent.			
[Default]				
[Reference]	0x1C 0x50, 0x1D 0x65 0x12			
[Example]	The device starts the ticket printing.			

The ticket advances ahead to the presenter and is caught between the presenter rollers. While the device continues printing, the portion of the ticket already printed is issued from the device.

When printing ends, the device cuts the ticket printed.

The ticket is caught between the presenter rollers.
The user withdraw the ticket from the bezel.

MISCELLANEOUS COMMANDS

0x1B 0x3D

<ESC =>

Select peripherals device

Valid for	MODUS3			
	MODUS3 Presenter			
	MODUS3 X			
	MODUS3 X Presenter			

[Format]	Hex	1B	3D	n
	ASCII	ESC	=	n

[Range] $0x01 \leq n \leq 0x03$

[Description] Select the device to which the host computer sends data, using n as follows:

n	FUNCTION
0x00, 0x03	Device enabled
0x02	Device disabled

[Notes] When the device is disabled, it ignores all transmitted data until the device is enabled through this command.

[Default] n = 0x01

[Reference]

[Example]

0x1B 0x40

<ESC @>

Initialize device

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter		
[Format]	Hex	1B	40
	ASCII	ESC	@
[Range]			
[Description]	Clears the data in the print buffer and sets the device to its default settings.		
[Notes]	<ul style="list-style-type: none">• The data in the receiver buffer is not cleared.• The macro definitions are not cleared.		
[Default]			
[Reference]			
[Example]			

0x1B 0x63 0x35

<ESC c 5>

Enable or disable LF LINE FEED key

Valid for	MODUS3				
	MODUS3 Presenter				
	MODUS3 X				
	MODUS3 X Presenter				

[Format]	Hex	1B	63	35	n
	ASCII	ESC	c	5	n

[Range] n = 0x00, 0x01

[Description] Enables or disables the LF LINE FEED key:

n	FUNCTION
0x00	Disables LF LINE FEED key
0x01	Enables LF LINE FEED key

[Notes]

[Default] n = 0x01

[Example]

0x1B 0xFA

Print graphic (640x409)

Valid for	MODUS3							
	MODUS3 Presenter							
	MODUS3 X							
	MODUS3 X Presenter							

[Format]	Hex	1B	FA	n	xH	xL	yH	yL
	ASCII	ESC	0xFA	n	xH	xL	yH	yL

[Range]	n = 0x00, 0x01							
	$0x00 \leq xH, xL, yH, yL \leq 0xFF$							

[Description]	Prints graphic logo from flash or current graphic page located in RAM based on the value of n as follows:							
---------------	---	--	--	--	--	--	--	--

n	FUNCTION
0x00	Print graphic page from ram (used at the moment)
0x01	Print logo 1 from flash

Printable maximum vertical dimension is 409 lines.
 $xL + xH \times 256$ specifies the starting dotline ($1 \div 409$).
 $yL + yH \times 256$ specifies the number of lines to print.

[Notes]	• If $[xL + (xH \times 256)] > 409$ the device does not execute the command.
	• If $[xL + (xH \times 256) + yL + (yH \times 256)] > 409$ the device prints only $409 - xL + (xH \times 256) + 1$ dotline.

[Default]

Set horizontal and vertical motion units

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter				
[Format]	Hex	1D	50	x	y
	ASCII	GS	P	x	y
[Range]	$0x00 \leq x, y \leq 0xFF$				
[Description]	Sets the horizontal and vertical motion units to 1/x inch and 1/y inch respectively. When x is set to 0, the default setting value is used. When y is set to 0, the default setting value is used.				
[Notes]	<ul style="list-style-type: none">• The horizontal direction is perpendicular to the paper feed direction.• The following commands use x or y, regardless of character rotation (upside-down or 90° clockwise rotation):				
	Commands using x: 0x1B 0x20, 0x1B 0x24, 0x1B 0x5C, 0x1D 0x4C, 0x1D 0x57.				
	Commands using y: 0x1B 0x33, 0x1B 0x4A.				
	<ul style="list-style-type: none">• This command does not affect the previously specified values.• The calculated result from combining this command with others is truncated to the minimum value of the mechanical pitch or an exact multiple of that value.				
[Default]	x = 204, y = 408				
[Reference]	0x1B 0x20, 0x1B 0x24, 0x1B 0x33, 0x1B 0x4A, 0x1B 0x5C, 0x1D 0x4C, 0x1D 0x57				
[Example]	$1/204 = 0.049$ inches = 1 dot				

0x1D 0x63

<GS c>

Print counter

Valid for	MODUS3 MODUS3 Presenter		
[Format]	Hex	1D	63
	ASCII	GS	c
[Range]			
[Description]	Sets the serial counter value in the print buffer and increments or decrements the counter value.		
[Notes]	<ul style="list-style-type: none">• After setting the current counter value in the print buffer as print data (a character string), the printer counts up or down based on the count mode set. The counter value in the print buffer is printed when the printer receives a print command or the buffer is full.• The counter print mode is set using 0x1C 0xC0.• The counter mode is set using 0x1D 0x43 0x31 or 0x1D 0x43 0x3B.• In count-up mode, if the counter value set by this command goes out of the counter operation range set by 0x1D 0x43 0x31 or 0x1D 0x43 0x3B, it is forced to revert to the minimum value.• In count-down mode, if the counter value set by this command goes out of the counter operation range set by 0x1D 0x43 0x31 or 0x1D 0x43 0x3B, it is forced to revert to the maximum value.		
[Default]			
[Reference]	0x1C 0xC0, 0x1D 0x43 0x31, 0x1D 0x43 0x32, 0x1D 0x43 0x3B		
[Example]			

0x1D 0xE6

Virtual paper-end limit

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter				
[Format]	Hex	1D	E6	nH	nL
	ASCII	GS	0xE6	nH	nL
[Range]	0x00 ≤ nH ≤ 0xFF 0x00 ≤ nL ≤ 0xFF				
[Description]	This command sets the limit, expressed in cm as [(nH × 256) + nL], after which is pointed out the virtual paper-end.				
[Notes]					
[Default]	nH = 0x00 nL = 0xF0				
[Reference]					
[Example]	<p>To see the virtual paper-end is pointed out after 15 metres from the first detection of low paper, it's necessary convert 15 metres in 1500 centimetres and then, calculate nH and nL value in the following mode:</p> $nH = 1500 / 256 = 5$ $nL = 1500 - (nH \times 256) = 1500 - (5 \times 256) = 220$ <p>and then send the following command:</p> <p>0x1D 0xE6 0x05 0xDC</p>				

0x1D 0xE8

Setting minimum ticket length

Valid for	MODUS3				
	MODUS3 Presenter				
	MODUS3 X				
	MODUS3 X Presenter				
[Format]	Hex	1D	E8	nH	nL
	ASCII	GS	0xE8	nH	nL
[Range]	$0x00 \leq nL, nH \leq 0xFF$				
[Description]	This command set the minimum ticket length as $(nH \times 256) + nL$.				
[Notes]	Set values between 52 mm and 199 mm. Values lower or higher than those specified are ignored.				
[Default]	52 mm				
[Reference]					
[Example]	To set the minimum ticket legth at 80 mm, the command sequence will be: 0x1D 0xE8 0x00 0x50				

0x1D 0xF0

Set printing speed

Valid for	MODUS3 MODUS3 Presenter MODUS3 X MODUS3 X Presenter									
[Format]	Hex	1D	F0	n						
	ASCII	GS	0xF0	n						
[Range]	0x00 ≤ n ≤ 0x01									
[Description]	Sets printing speed based on the value of n as follows:									
	<table><tr><th>n</th><th>PRINTING SPEED</th></tr><tr><td>0x00</td><td>High quality</td></tr><tr><td>0x01</td><td>Normal</td></tr></table>				n	PRINTING SPEED	0x00	High quality	0x01	Normal
n	PRINTING SPEED									
0x00	High quality									
0x01	Normal									
[Notes]	Printing speed reverts to the default value when the device is reset or turned off.									
[Default]	n = 0x01									
[Reference]										
[Example]										

0x1D 0xFF 0x26

Enable or disable anti-jam procedure

Valid for	MODUS3 X Presenter												
[Format]	Hex	1D	FF	26	31	n	cks						
	ASCII	GS	0xFF	&	1	n	cks						
[Range]	n = 0x00, 0x01 cks = 0x73, 0x74												
[Description]	Enable or disable the anti-jam procedure, based on the value of n as follows:												
	<table><tr><th>n</th><th>FUNCTION</th></tr><tr><td>0x00</td><td>Anti-jam procedure disabled</td></tr><tr><td>0x01</td><td>Anti-jam procedure enabled</td></tr></table>							n	FUNCTION	0x00	Anti-jam procedure disabled	0x01	Anti-jam procedure enabled
n	FUNCTION												
0x00	Anti-jam procedure disabled												
0x01	Anti-jam procedure enabled												
[Notes]	<ul style="list-style-type: none">• If n = 0x00 the anti-jam procedure is disabled and the value of cks is 0x73.• If n = 0x01 the anti-jam procedure is enabled the value of cks is 0x74.• The cks field is 1 byte calculated by the device as the sum of the bytes transmitted.												
[Default]	n = 0x01												
[Reference]	0x1D 0xFF 0x71												
[Example]													

0x1D 0xFF 0x71

Anti-jam procedure status

Valid for	MODUS3 X Presenter						
[Format]	Hex	1D	FF	71	31	26	E4
	ASCII	GS	0xF0	q	1	&	0xE4
[Range]							
[Description]	Transmits the enabling status of the anti-jam procedure.						
[Notes]	<ul style="list-style-type: none">• Returns 0x01 if the anti-jam procedure is enabled.• Returns 0x00 if the anti-jam procedure is disabled.• The anti-jam procedure makes multiple attempts to move the ticket to try to free the anti-jam sensor.						
[Default]							
[Reference]	0x1D 0xFF 0x26						
[Example]							

ALIGNMENT

1	ALIGNMENT COMMANDS	179
---	--------------------------	-----

1 ALIGNMENT COMMANDS

The devices are equipped with a sensor that allows the use of alignment black mark to handle rolls of tickets with pre-printed and fixed length fields;

For further information, refer to the user manual of the device.

The commands available for managing the alignment of the ticket are the following:

- **0x1D 0xE7**: sets the distance between the point of alignment and the black mark (value of parameter “Black Mark Distance”)
- **0x1D 0xF6** and **0x1D 0xF8**: perform the ticket alignment, which is advanced to align the first point of alignment available under the sensor.

Print a ticket with alignment requires the following sequence of commands:

1. General settings of the ticket: character formatting, print density, margins etc.
2. Alignment command: **0x1D 0xF6**.
3. Ticket printout: printing text, logos or any graphic.
4. Alignment command: **0x1D 0xF8**.
5. Cut command.

NOTE: The settings take effect from next ticket to the one already in the device.

In the following examples, are described some sequences of commands to manage the alignment.

[Example 1]

Commands sequence to print tickets with “alignment point” over the edge of the black mark (“Black Mark Distance” = 0 mm set from setup).

Start

Paper with black mark not aligned.

Alignment command `0x1D 0xF6`.

Paper is fed. The black mark is recognized by the sensor and aligned under the printing line.

Command for text printing:

'TICKET 1', 0x0A, 'FIRST LINE', 0x0A, 'SECOND LINE', 0x0A

Alignment command 0x1D 0xF8.

Paper is fed. The next black mark is recognized by the sensor and aligned under the printing line.

Cut command **0x1B 0x69**.

Paper is fed until the black mark is not aligned under the cutting line.

The paper is cut. The paper is retracted under the printing.

[Esempio 2]

Commands sequence to print tickets with “alignment point” moved 5 mm compared to the edge of the black mark (“Black Mark Distance” = 5 mm set from setup).

Start

Paper with black mark not aligned.

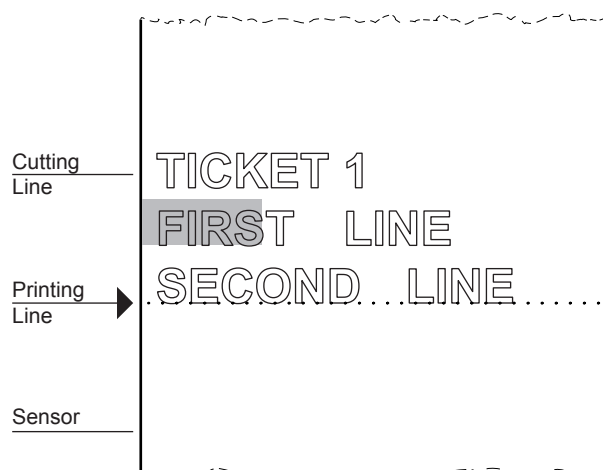

Alignment command **0x1D 0xF6**

Paper is fed. The black mark is recognized by the sensor and aligned at a distance of 5 mm (“Black Mark Distance”) from the printing line.

Command for text printing:

'TICKET 1', 0x0A, 'FIRST LINE', 0x0A, 'SECOND LINE', 0x0A

Alignment command 0x1D 0xF8.

Paper is fed. The next black mark is recognized by the sensor and aligned at a distance of 5 mm ("Black Mark Distance") from the printing line.

Cut command **0x1B 0x69**.

Paper is fed until the black mark is not aligned at a distance of 5 mm ("Black Mark Distance") from the cutting line.

The paper is cut. The paper is retracted under the printing.
